

SDG 15 – Collaboration for shared land ecosystems

Tim Pengabdian FKM Unsri Ajak Warga Manfaatkan Sampah Plastik

Collaboration for shared land ecosystems in Indonesia is essential for sustainable environmental conservation and the well-being of our diverse natural habitats. The issue of plastic pollution is a critical concern in the context of collaboration for shared land ecosystems in Indonesia. Plastic waste, particularly single-use plastics, poses a significant threat to the country's diverse and fragile ecosystems. Plastic debris, whether on land or in water bodies, has detrimental effects on the environment, wildlife, and human health.

Tim Pengmas FKM Unsri, ibu-ibu PKK, kader dan masyarakat Desa Burai, Kecamatan Tanjung Batu, Kabupaten Ogan Ilir, Provinsi Sumatera Selatan. —ist

Sriwijaya University's faculty of public health will carry out community service activities in 2022 in Burai Village, Tanjung Batu District, Ogan Ilir Regency. community service with the theme Making Healthy Burai a Reality by Strengthening the Happy Healthy Living Community Movement (Germas) invites every village community to pay more attention to the problem of plastic waste.

Plastic has become a real threat to the continuity of an ecosystem, so the Sriwijaya University community service team invites every community to recycle plastic or reprocess it into new items.

This activity received good results and response from the village community and succeeded in making the ecosystem better maintained.
