

BEM KM UNSRI Luncurkan Program Sedekah Sampah Untuk Bantuan UKT

The policy on plastic waste reduction in Indonesia aims to address the environmental challenges posed by plastic pollution by implementing measures to minimize plastic usage and encourage sustainable alternatives. This policy emphasizes the importance of reducing the production and consumption of single-use plastics, implementing efficient recycling and waste management systems, and promoting public awareness about the detrimental impacts of plastic waste on the environment.

BEM KM Sriwijaya University has created a policy to overcome the plastic problem in the university environment, where collected plastic waste can be exchanged for reduced tuition fees. This policy does not target a direct ban on the use of plastic, but this policy reduces the amount of plastic waste that exists. because the plastic waste obtained will be recycled back into ready-to-use plastic. This prevents the amount of plastic waste from increasing.

This policy was created in 2021 and this policy is still in effect today.
