

Precision Agriculture For Global Food Security

Sustainably farmed food on campus in Indonesia promotes environmentally friendly practices while providing nutritious meals for the university community. Sustainable farming methods, such as organic agriculture and responsible sourcing, ensure that the food served on campus supports local farmers and reduces the ecological footprint, making it a win-win solution for both the environment and the well-being of the campus population.

Sriwijaya University's agricultural faculty has published a book entitled "PRECISION AGRICULTURE FOR GLOBAL FOOD SECURITY" and this book was published in 2022. This book contains information about how to make agriculture more appropriate and sustainable for the global environment, especially the university environment itself.

This book contains various actions, methods or policies for anyone who wants to enter the world of agriculture. The public can access this book for free through the Sriwijaya University library, or order it from the Sriwijaya University Technical Implementation Unit (UPT).
