

SDG 17 – Collaboration for SDG best practice

Kerjasama dengan CIFOR-ICRAF

It has been 5 years since Sriwijaya University collaborated with CIFOR-ICRAF in carrying out landscape restoration. In that time period, the collaboration has successfully conducted research and developed a new 'agrosilvofishery' approach that can be increased in scale across related peatlands, which is closely related to SDG 15. Sriwijaya University is renewing its collaboration with CIFOR-ICRAF starting in 2023. This is done so that research and projects carried out together can run sustainably and create more sustainable land, especially in the Palembang city.
