SDG 2 – Indicator 2.5.2 - Events for local farmers and food producers

Sharing knowledge with wetland farmers

Sriwijaya University (UNSRI) routinely distributes a budget for lecturers together with their supervised students to organize activities to transfer knowledge to local farmers and food producers. This knowledge transfer process is conducted after making initial observations about the potential of the land and the availability of materials or tools that are financially affordable to local farmers.

This knowledge transfer and farming skills improvement program is managed and financed through the Institute for Research and Community Service (LPPM). The UNSRI campus is situated close to and surrounded by wetlands. Therefore, the development of science and technology at the UNSRI has been focused on wetland management to improve the livelihood of farmers and communities living at inland, tidal, and peat swamps (BL, RAS, KTK, MLN).
